

# What's causing your red, itchy, irritated eyelids?

A closer look at what's happening on your eyelids

**Demodex blepharitis (DB)** is a common eyelid disease caused by an overgrowth of *Demodex* mites.<sup>1,2</sup> Some of us may not even know we have it.<sup>1,3</sup>

Approximately **25 million** eye care patients in the US have DB.<sup>3,4</sup> Ignoring DB can leave you more prone to other, **more serious eye-related issues**.<sup>1</sup>

## Common signs and symptoms of DB<sup>1-3,5:</sup>

- Eyelid redness
- Itching along the base of the eyelid
- Dry eye
- Missing or misdirected eyelashes
- Swelling/inflammation
- Crusty flake buildup (collarettes)

100% of patients with collarettes have DB.<sup>3,6</sup>

Images are of real patients with DB.

Ask your eye doctor to check you for *Demodex* blepharitis (DB) to see where you stand.

Only they can properly diagnose DB.

Don't freak out.  
Get checked out!
